

# Smart Community

---

- B2C (from the insurance to the insured)
  - Early warning
    - Create and open up a common platform for joined benefit across customers/regions using data from a range of devices, i.e. pest control, weather patterns
    - Create a mash information system across customers/regions, i.e. more detailed long term information for planning purposes
    - Bundle big data and developments to feed common Artificial Intelligence activities
  - Information Exchange
    - Top IoT devices and application combinations
    - Top savings using IoT
    - Network and application news, possible resource bundling and sharing
  - Direct IoT activity
    - Use intelligent sensors (Arduino sensors) to allow direct communication/activities across customers/areas (two way)
      - ⇒ Sensors initiate other sensor activities....
- Support mid- to long-term research

# Smart Community

---

- Consumer Platform facilitated by insurances
  - Intelligent sensors
    - Combine sensors and measurements across customers/properties
    - Allow two-way communication across intelligent sensors
  - Optimize resources
    - Share private networks
    - Share power supplies in remote areas
  - Solutions and best practices
    - Consumers share resources and experiences
    - Interchange of issues and challenges
